

## Introduction

We bring you the most customizable Vegas style casino games and casino platforms available for your gaming business. Designed for professional players, the software has been the product of 5 years of intensive development with several casino specialists from around the world.

The entire software is built from the ground up and has withstood intensive testing on diverse platforms, by our testing team as well as the real world players. Our casino software has been developed to offer the best features and maximum entertainment to players.

There are many integration options for our casino platform as below:

- Operate it as a standalone site
- Integrate it with your existing web site
- Integrate with our online poker platform to provide a complete iGaming experience

The salient features of this software are:

1. Pleasing design and graphics
2. Complete encrypted security
3. Ease of installation and use
4. Small file sizes
5. Developed for community building and user engagement
6. Available in real money and subscription models
7. Available in Network Operator and Stand-Alone deployment versions

## Casino Game Interface

- Custom lobby and game design to suit your design/theme requirements
- Browser based or integrated with poker software
- Casino Hand History for each casino game
- HD Graphics with full, smooth scaling
- Highly informative games lobby
- Integrated site links in the menu with complete help
- Ban players (IP or email)
- Customized payout percentages
- Standard Gaming options
- Full sound with adjustments and user preference settings
- Attractive animation and original graphics
- Wide variety of game choices
- Completely encrypted game interface for security
- Easy navigation with game screen preview
- Provision for custom payment gateway integration
- Complete game branding for your domain
- Complete SSL communications with full Encryption at data layer
- Mersenne Twister based RNG Engine
- Scalable with additional load balancing servers
- Ready availability of new games to add to your suite
- 100% customization services to meet your business needs
- High readiness real time support for all customers.
- Compatibility with all major browsers.

## Web Site Features and Customization Options

1. General User section, signup, login and information sections with SQL injection protection
2. User control panel to view user information, cash credits, account details, games history and load accounts with cash
3. Complete lobby chat system with Kick/Ban system to disbar players from the site and built in editable bad word filter.
4. Money Updater to update player cash in Real Money and Play Money
5. SSL implementation on your server (SSL provided by you)
6. Max. 5 Payment systems of your choice including one Visa / Master Card processor integrated free. Gateway accounts to be provided by you.
7. Server software takes into account various configurations for player bonuses and other promotions as may be organized.
8. Can develop any combination of bonus and promotion schemes on demand
9. Custom Promotions management system
10. Standard Room design from options provided (examples shown at end of document) with your own branding and logos.

## Deployment Options

The Salus Casino Software offers various deployment methods as indicated below.

1. Direct Web based access to customers
2. Download and Install casino software client
3. Deploy on Kiosks installed at customer locations like malls/club/store etc.

### **1. Web Based Access**

With the web based access system, the user will directly login to a web site through a designated URL. Once logged in, the user can directly browse the selection of available casino games and play.

### **2. Downloadable Client**

With the download client, the user must download the casino client application and install it on their local computer. The installed software is run and the client can then browse the selection of games to play.

### **3. Kiosk based deployment**

With the kiosk based system, the client software is installed on dedicated KIOSK terminals. These are windows PC's with complete touch screen capability. Kiosks are fully protected from tampering using multiple proprietary fraud and damage protection systems. KIOSK terminals can also be attached with BILL or COIN ACCEPTOR devices to load credit for players. The Salus system is fully integrated with various devices supplied by JCM.

In addition, kiosks can also be optionally fitted out with IC based smart card reader device for instant access. Users will be given smart cards with pre-loaded credit by Location based operator and they will seamlessly insert the cards into the readers on the KIOSK and get instant access to play.

The following page shows an example KIOSK based game terminal and related equipment.

Bill Acceptor	KIOSK	Smart Card Reader and Card
		

### Games List

Blackjack	Video Slot	Video Poker	Other Games
European Blackjack	Angels & Demons	Aces and Faces	American Roulette

## Site Administration Panel

1. Completely remote controlled systems
2. User administration
3. Management of payment systems and cashier
4. Player account history
5. Support request management
6. Administrator management
7. Business reports (Wide Variety or reports to check your business performance)
8. Player statistics
9. Game statistics
10. Additional custom reports if required for specific analysis scenarios can be developed for free as required.
11. Tournament sponsor and logo management

## Minimum Client System Requirements [including Kiosks]

- Windows 2000/2003/XP/Vista/Windows7
- 1Ghz system with at least 256MB of free RAM, 128 MB free disk space
- Download size: Approx 8 MB
- Screen resolution of at least 800 X 600 pixels with minimum of 256 colors
- Stable internet connection.

## Minimum Server Typical Configuration requirements

### **Game Server**

For installing game services.

OS: Windows 2003 or later

Intel DUAL XEON, Min 4GB RAM with 200MB free Space for setup and installation.

Additional space required for writing game logs and hand history.

RAID1 minimum failover

### **Web Server**

OS: Windows 2003 or later with Intel QUAD Xeon, 16GB

This will host the web site and administration sections. These can be combined with the web site initially. Game server and web server can be on same physical box.

SSL is strongly recommended for each sub domain to be used.

### **Database Server**

OS: Windows 2003 or later with Intel QUAD Xeon, 16GB

Microsoft SQL Server 2005 Database Server Standard Edition or better

All boxes should be located in a single data center for better performance.

For initial starting considerations, a 2 box system can provide adequate support for up to 5000 simultaneous players.

## Recommended hardware Add-ons

We recommend putting a hardware firewall in front of the network to prevent attacks and improve security against malicious attacks.

## Pricing

Pricing is dependent on your exact requirements and degree of customization for your specific Business model to include any special features not already present in our current offerings.

Please consult a sales representative for pricing.

## Support

Free Support for training and fine-tuning the software is available for 30 days from date of deployment.

Full Customized support is available after the free support period of 30 days. This shall include software enhancements, player support and management, and other related support. Pricing will be based on your specific requirements. Support beyond 90 days is subject to a separate contract and does not form part of the basic pricing above.

Further customization and feature development support is provided at \$10 per hour or on a lumpsum basis as may be agreed form time to time.

Player technical support and complete game management services are provided under separate contract. This includes total game and server management, player support and monitoring of all tables and games.

## Delivery Times

Standard version with GUI customization will require 4-6 weeks from confirmation of order. Customization of business logic, additional features coding, etc. may require additional time depending on the nature of customization and will be discussed and agreed to in advance.
